

Acknowledgments

I would like to acknowledge the contributions of the following individuals, in alphabetical order.

Gail Arnold, for her extraordinary diligence in editing the language of the book.

Issam Awad, M.D., Ph.D., for discussions about his biopsy findings and for his encouragement during my early investigation of fibromyalgia.

Carol Burckhardt, Ph.D., for permission to reprint the updated Fibromyalgia Impact Questionnaire and the instructions for scoring it.

Jan Calloway, for editing chapters of the book.

Bill Cohen, Publisher of Haworth Medical Press, for his kindness and integrity. Web site: <getinfo@haworthpressinc.com>

Ruth Crumley, M.D., for her enthusiasm for metabolic rehabilitation, and for her cooperation with my wife, Dr. Gina Honeyman-Lowe, in freeing patient after patient from their fibromyalgia.

Malford E. Cullum, Ph.D., for extremely helpful communications regarding biochemistry.

Professor J. Eisinger, whose biochemistry studies are without parallel in expanding our understanding of fibromyalgia, for voluminous and enriching communications over several years. Web site: <<http://www.infomyalgie.com>>

Steve Emerson, for providing me with references related to the effects of mercury on the thyroid system; and along with Gary Osborne, Anne Bradley, and one other person who wishes to remain nameless here, for being exemplary voices of reason and fair-mindedness in Internet communications about matters of logic, medical research, and fibromyalgia.

Richard Finn, C.T.P.M., for sharing his understanding of the relation of myofascial trigger points to fibromyalgia.

Richard L. Garrison, M.D., for his encouragement, favors, and continuing our line of research.

John Gedye, M.B., B.Chir., for serving as a model of tolerance, diplomacy, and rationality, and for many enriching conversations based on his extraordinary understanding of the philosophy and logic of science.

Jay A. Goldstein, M.D., for courageously crossing most basic science fields and all clinical specialties in his search for the links essential to understanding fibromyalgia—something he has been condemned for but for which I praise him—and for publishing his findings.

Lloyd H. Graf, Jr., Ph.D., for extremely helpful communications regarding biochemistry and molecular biology.

Sharland and Richard Grimes, for their generosity and support for our studies of fibromyalgia.

Arthur C. Guyton, M.D., for extremely helpful conversations about general physiological regu-

latory systems.

Lillian McConnell, musician and teacher who understands the flightiness of the Muses and generously provided a haven where they and I could meet.

William L. Mikulas, Ph.D., for teaching me so many years ago the value of informative feedback—an indispensable feature of the metabolic rehabilitation of fibromyalgia patients—within the context of behavioral psychology.

Garth Nicolson, Ph.D., for his exceptional generosity in making detailed and extensive recommendations for changes in the sections on mycoplasmal infection in Chapter 3.13. Web site: <www.immed.org>

Alan J. Reichman, M.D., for his extraordinary generosity, cooperation, and competence as my cotreating physician and as a member of our research team.

Mary Shoman, for important communications and for her tireless devotion to providing people with accurate, reasonable, and practical information through her Web site and newsletter, *Sticking Our Necks Out*, about their thyroid diseases. Web site: <<http://thyroid.about.com>>

David G. Simons, M.D., for valuable communications regarding fibromyalgia, myofascial pain syndromes, and the clinical use of T₃, and for lending his support to me in several circumstances.

Jim W. Spears, M.S.W., L.C.S.W., for reading Chapter 1.2 and providing useful suggestions for revisions.

Mervianna Thompson, R.N., M.S.N., A.P.N., for suggesting to me that a modified version of the rule of nines method for burn victims could be a method of measuring fibromyalgia patients' pain distribution, and for her help with our double-blind studies.

Steve Usala, M.D., Ph.D., for extremely valuable talks about thyroid hormone resistance syndromes and *c-erbA* gene mutations, and for encouraging me to pursue the association between thyroid hormone resistance and fibromyalgia.

Fredrick Wolfe, M.D., for his preeminent role in providing us with criteria for identifying fibromyalgia patients—criteria which have enabled researchers the world over to study and further understand fibromyalgia patients, and for his helpful communications over the years.

Todd Yellin, B.S., for reading, editing, commenting on, and spending time with me working on concepts and language in the cell and genome chapters (Chapters 2.2. and 2.3).

PEOPLE FOR WHOM THANKS IS NOT ENOUGH

Jackie Yellin, my Editor and collaborator and best friend of twenty years.

Michael Yellin, one of the finest people I have ever met, for his friendship and his endless understanding, support, patience, and generosity.

Tammy Lewis Lowe, my wife, the mother of our lovely daughter Michele, and the person who most inspires me every day.
